

HOW TO MAKE A PARKER HEX WHAMMY BAR

1. Purchase a long 3/16" allen wrench

https://smile.amazon.com/Eklind-Tool-51912-Hex-Key/dp/B000GTORZE/ref=sr_1_2

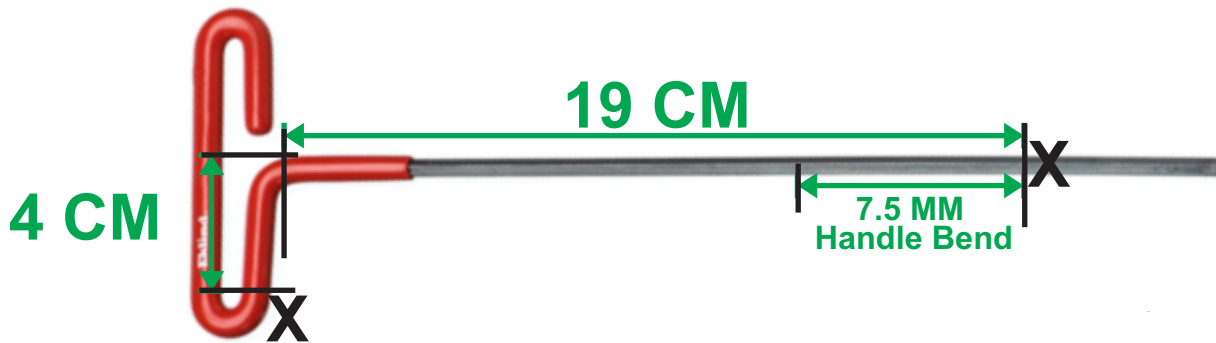

2. Note the similarity of the shapes.
Not much bending is needed.

3. Remove red handle plastic, cut at 4CM toward the handle bend, and 19CM for the long end.

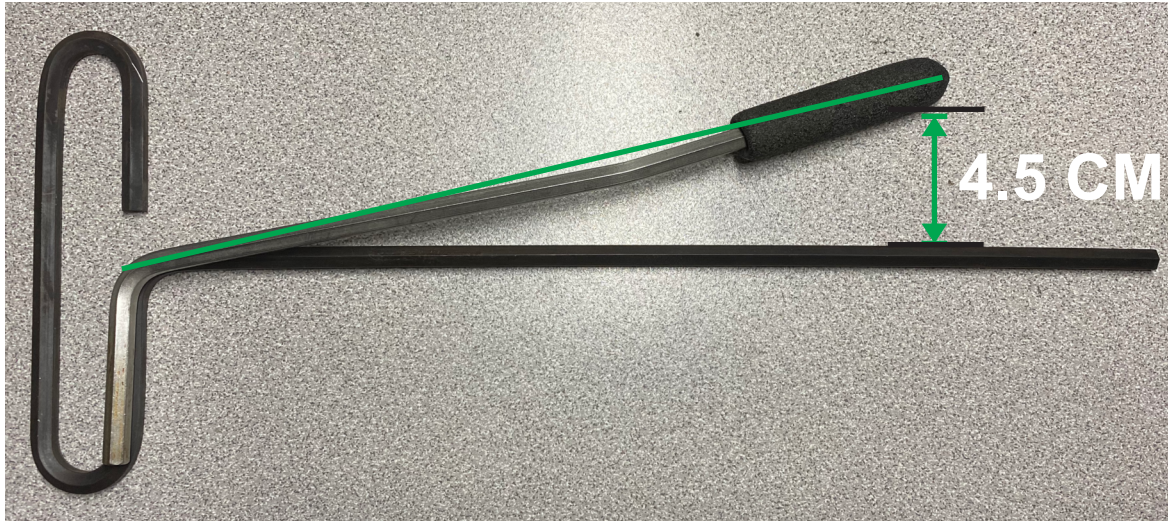

4. Optional “handle” bend: With short end pointing down, heat and bend 7.5mm from long end to 10 o'clock angle, creating 14 MM space from baseline.

5. Heat and bend arm up to create 4.5CM space between end of arm and baseline

6. Optional - to create black foam tip, buy closed cell 1/2" dowel from Hobby Store, cut to length, drill center hole and sand to shape.
